Projects

FABRICATION OF VACCUM GRAIN COLLECTER.

This Project deals with to collect the grains with simple way. Inlet & Outlet Pressure: The effectiveness of the component comes with equal positive and negative pressure. Material suction and throw becomes more effective with right pressure. Measuring CFM: Cubic Feet per Minute are a measure of the volume through which the material passes through. Blower CFM is the measure of air flow occurring within the blower. Higher the pressure, the more the gasses will be compressed and therefore higher will be the CFM. Impeller Design: These are rotating blades through which air passes. K.E. of Impeller increases due to Pressure increases of air. Higher rotating speed more pressure of blower. Weight and Durability of Blower. Light weight material is considered as a part of it.
